CEO + Executive Team Advisory Services

There is nothing more important to the effective, profitable and sustainable operation of a business than attending to the psychological lives of the people leading it.

- Helping leaders develop and use psychological strategies to enhance decision-making and lead more effectively.
- Leveraging expertise in understanding complex individual and interpersonal traits and capacities to provide critical assessments of CEOs and management teams.
- Separating psychological signal from noise to accurately forecast a prospective leader's impact on organizational culture and performance in leadership succession or transition.

Boards + Corporate Governances

A high-performing Board of Directors is crucial to organizational success.

- Elevating board effectiveness through pragmatic, expertise-based guidance in board dynamics, culture, decision-making and effectiveness.
- Supporting and optimizing boards' governance capabilities and practices in enterprise risk, CEO assessment & succession, strategic planning, and board–CEO alignment and partnership.

Humans + Technology

Technology is a human enterprise, and advanced and emerging technologies are the product of human decision-making which affect human lives.

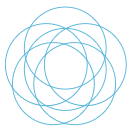

- Cybersecurity is a human issue that involves technology, not a technology problem to be solved technically.
- Advising companies that develop and deliver human-centered technologies in the psychology of artificial intelligence, synthetic cognition and affective computing.
- Ensuring technologies that assume decision-making functions in human affairs are ethically and socially responsible by-design.

Fraud, Corruption + Financial Crime Advisory Services

Fraud, corruption, white-collar malfeasance, executive misconduct. No two incidents are identical. But the common denominator is malicious human behavior—deception, psychological manipulation, breaches of trust and abuses of power.

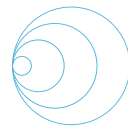

- Helping organizations proactively mitigate misconduct risks and designing and deploying psychologically sophisticated defense and response solutions to malfeasance.
- Providing cutting-edge psychological tools to bring fraudsters and other corrupt actors to justice, dismantle nefarious organizations and recover victims' losses.
- Decoding human behavior to forecast imminent malicious action and open a third dimension on incident mitigation, case management, strategy and prosecution.

Culture, Ethics, Compliance + Human Risk

Enterprise culture is an expression of the attitudes, values, behaviors and personalities of the people who lead it and work in it—the ecosystem of people in relationships with each other in a professional setting.

- Helping leaders re-calibrate or transform organizational culture.
- Assisting senior leaders and ethics & compliance officers in assessing and effectively remediating complex ethics and compliance issues.

Thought Leadership + Public Speaking

Dr Alexander Stein is an engaging public speaker, adept at accessibly communicating complex issues and is also a widely published and cited writer. He is currently a contributor to Forbes focusing on the psychology of decision-making and unintended consequences in organizations and society. He is available for podcasts and webinars, on-camera broadcast commentating, corporate off-sites, clinics and workshops, and as a conference keynote speaker or panelist.
